

Tarnished Foil Technique

By Wendy Lee

To create the tarnished foil look wrap a piece of cardstock in aluminum foil.

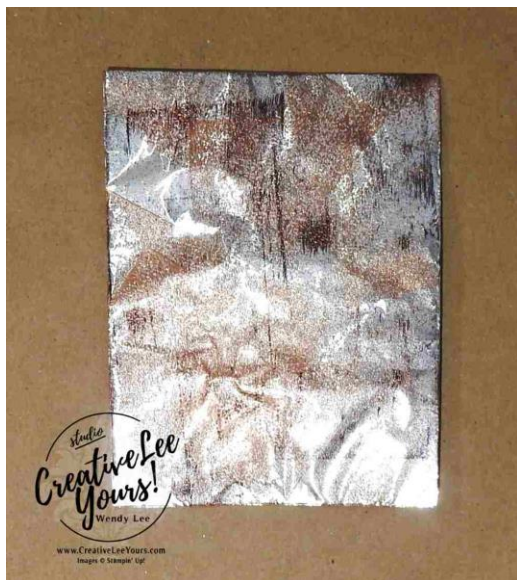

This is what it will look like on the back on you wrap the foil around the cardstock. You can choose to add some scotch tape to hold it in place if you like.

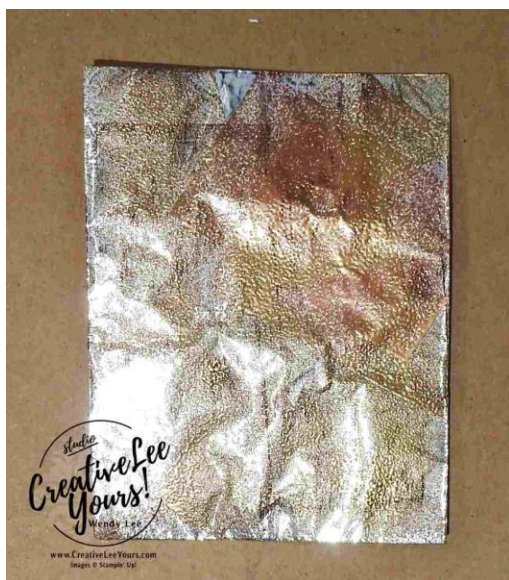

This is what it will look like on the front.

Drag your Staz-on ink along the front of the foil.

Using the versamark pad, dab ink randomly along the surface and then emboss with copper embossing powder.

Using the versamark pad, again dab ink randomly along the surface and then emboss with gold embossing powder.

You can use this as a card layer as it is or add texture with an embossing folder as we are doing in class.
